

## Digestive comfort and performances

**AQUA TECHNA** offers Aquaviance, an original additive solution that reinforces natural growth of aquatic animals, zoo-technical performances and sanitary farm conditions.

Aquaviance contains plant extracts, aromatic substances and prebiotics with the aim of:

- Contributing to the **stimulation of digestive functions**,
- Helping to maintain a **good balance of intestinal flora**.

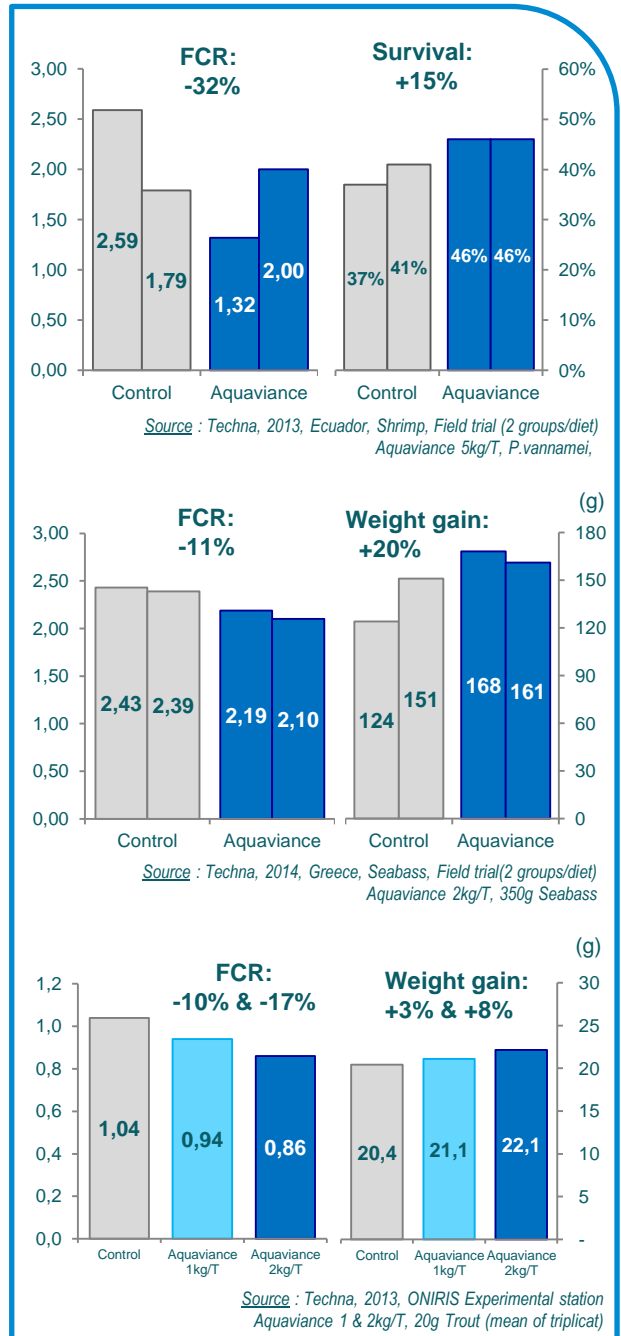

Aquaviance can be used in **pelleted or extruded feed** for both fish and shrimp.

Aquaviance can be incorporated in feed in two ways:

- **On top** with the aim of increasing the performances,
- **Valued with a matrix in formulation software** to decrease feed cost with same performances.

Aquaviance can also be applied daily and directly by the farmer by coating it on the feed, by mixing it either into clear water or in quality fish oil, then spraying the mix on feed.

Use the preparation within 24/48h maximum.

### USE

Crustaceans : 2 to 5 kg/T  
 Fish : Starter - Grower : 1 to 2 kg/T  
 Risk period : 2 to 5 kg/T
