

Protein savings Economic performances

AQUA TECHNA offers Economix, an additive solution that allows **better protein utilization, optimization of feed formulation and costs savings.**

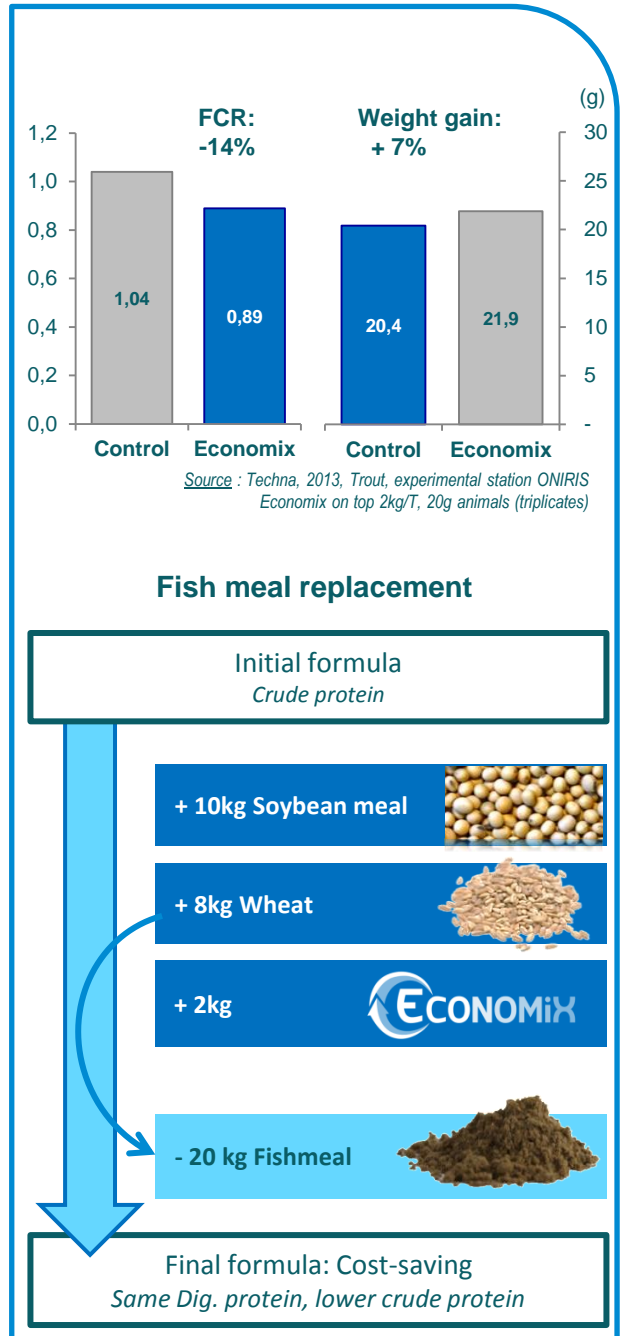

Actives substances of Economix have several actions:

- To **enhance the digestibility of protein** contained in feed, especially the one that are not digestible by the animal,
- To participate in **covering the essential amino acid** needs of the animals,
- To **reduce the fish meal** level while conserving good feed intake and performances.

Economix can be used in extruded or pelleted feed in 3 different ways:

- **Top feeding** to increase the digestibility of protein in feed, thus contributing to obtain higher performances,
- As a **substitute to fish meal** to reduce cost of fish feed and its fluctuations:
 - Either by a **2% replacement of fish meal**
 - Or by **reformulating** with its matrix value,
- To **secure performances** when using vegetable raw material.

Economix is directly incorporated into the feed together with other additives.

Use

Fish and crustacean: 2 kg/MT feed
