

Stress resistance of farmed fish and shrimps

AQUA TECHNA offers IMMUTECH, an additive solution allowing to go through **stressful periods**. It prepares the animals by **reinforcing their resistance, helping them to recover**.

IMMUTECH contributes to the reduction of mortality risk on farm.

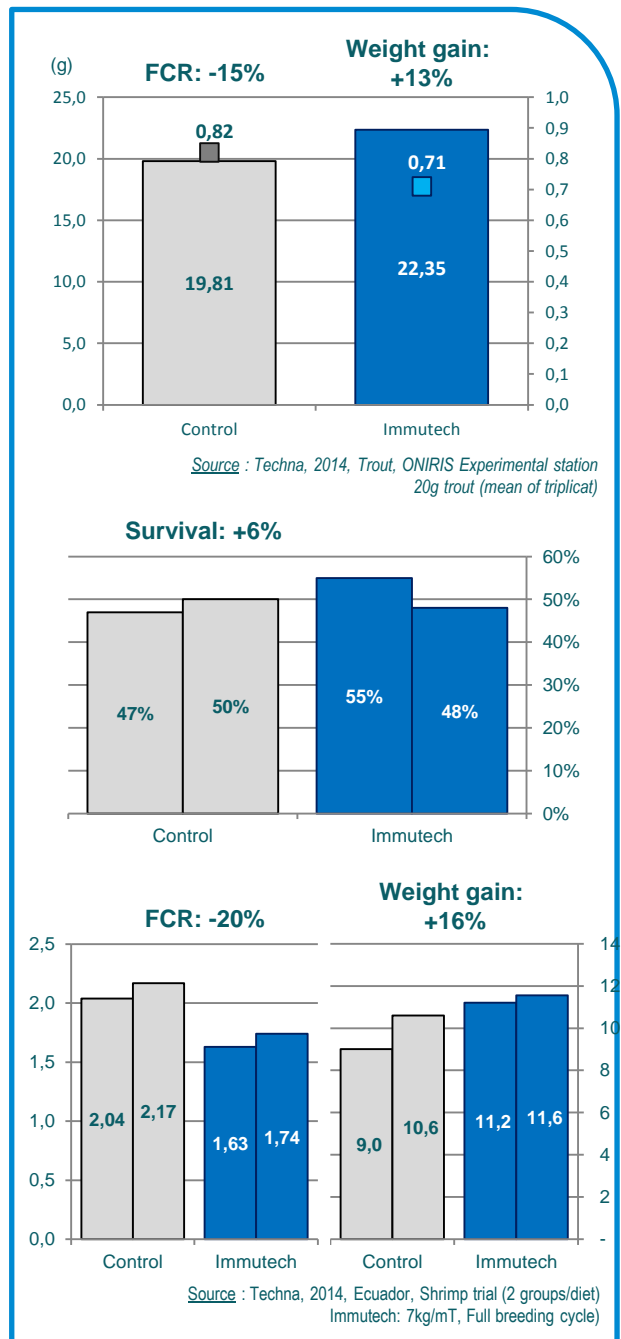

Active substances of IMMUTECH have several actions:

- To contribute to the stimulation of **non-specific immune response**,
- To participate in the **improvement of resistance of the animals** during stressful events, bacterial or viral infection,
- To participate in **maintaining zoo-technical performances** during stressful times.

IMMUTECH is an original additive solution that can be used in pelleted or extruded feed. It is directly incorporated after grinding together with the other additives.

IMMUTECH can also be applied daily and directly by the farmer on top of the feed. To do this, mix IMMUTECH with clear water or quality fish oil then spray the mix on the feed.

Use the preparation within 24 to 48h maximum.

USE

Fish and Crustacean: 2 to 5 kg/T of feed, 2 to 4 weeks around the stressful period
