

TECHBIND

Efficient binder for aquafeeds

TECHNA offers **TECHBIND** a powerful binder that provides optimal performance for, granulated or extruded aquafeed at low incorporation rates.

The binding properties of **TECHBIND** are activated by the water injected during the manufacturing process.

TECHBIND subsequently becomes non-hygroscopic and thus allows a better resistance of food to water.

TECHBIND contains vegetable gums and calcium sulphate allowing:

- A low incorporation rate in the formula,
- High stability over time

TECHBIND is an original additive that can be used in granulated or extruded feeds.

It is incorporated in a mixer after the vitamins and other micro-ingredients of the recipe.

AQUANEO, also provides technological assistance to support you:

- Expertise in raw materials, feed formula linked to its processing.
- Feed factory audit
- Specific feed production issues (dust, durability, water stability, buoyancy...)

USE

Fish and Crustaceans : 1 to 2 kg/T
