

# ACTILIP

AQU055

## Improving Retention of Fat and Fat Soluble Compounds in Aquafeed

### PROPERTIES

---

*“Lipid digestion requires emulsification of the lipids released from the feed in the stomach and intestine in the initial steps of digestion” (N.R.C, 2011)*

**ACTILIP** is a “state of the art” emulsifier. It is designed to enhance fat and fat-soluble compounds digestibility in aquatic species.

### COMPOSITION

---

Its composition is based on the results of a comprehensive **AQUATECHNA R&D** program. The objective of this thorough work was to determine which combination of active substances is the most efficient in cold-blooded animals.

Non ionic emulsifier

- Strong hydrophilic action.
- Improves the solubility and dispersion of micro-ingredients resulting in their optimized use.

Natural Saponin

- Saponins are natural emulsifiers,
- Saponins are also have surfactant and dispersing effects

### DIRECTION OF USE

---

- **ACTILIP** is available in powder form
- Recommended incorporation rate: 1 or 2 kg **ACTILIP** per ton of feed depending on the formulation context.
- Store in a cool dry place
